Efficient I/O with zero-copy & psutil

利用零拷贝和 psutil 来高效的进行 I/O 操作

Giampaolo Rodola
Pycon China 2019, Shenzhen

Who am I?

- Giampaolo Rodola
- Python core-developer since 2010
- Author of **psutil** library
- Author of **pyftpdlib** (Python FTP server) library
- https://github.com/giampaolo

Agenda

- Part 1:
  - basic UNIX concepts
  - basic socket operations
  - send files efficiently
  - copy files efficiently
- Part 2:
  - psutil

- 第1部分
  - 基础的 Unix 概念
  - 基础的 Socket 操作
  - 高效的传输文件
  - 高效的复制文件
- 第2部分
  - psutil

UNIX concepts (oversimplified)

[简单聊聊 Unix 的相关概念]

System call / 系统调用

- A way for a user-space application to interact with the kernel
- (mostly) exposed in the **os** module

- 用户空间中的应用程序用于与内核交互的手段
- 在 Python 中相关的 API 由 **os** 模块提供

System calls / 系统调用

I/O

- open()
- read()
- write()

Filesystem / 文件系统

- chmod()
- mkdir()
- getcwd()

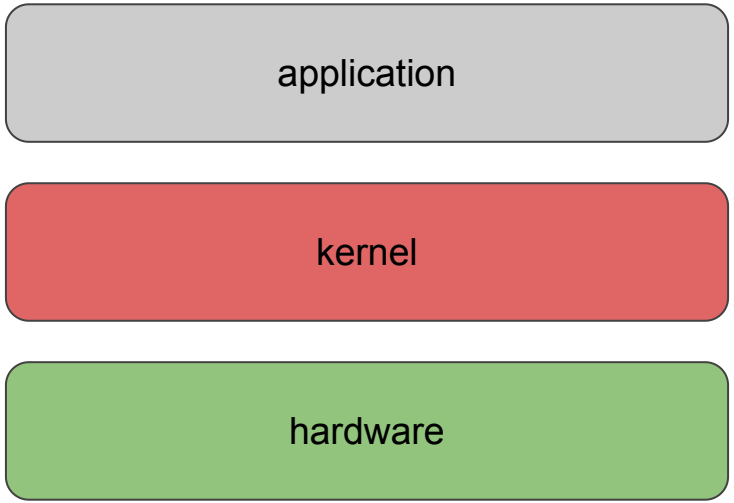
Processes / 进程

- fork()
- kill()
- wait()

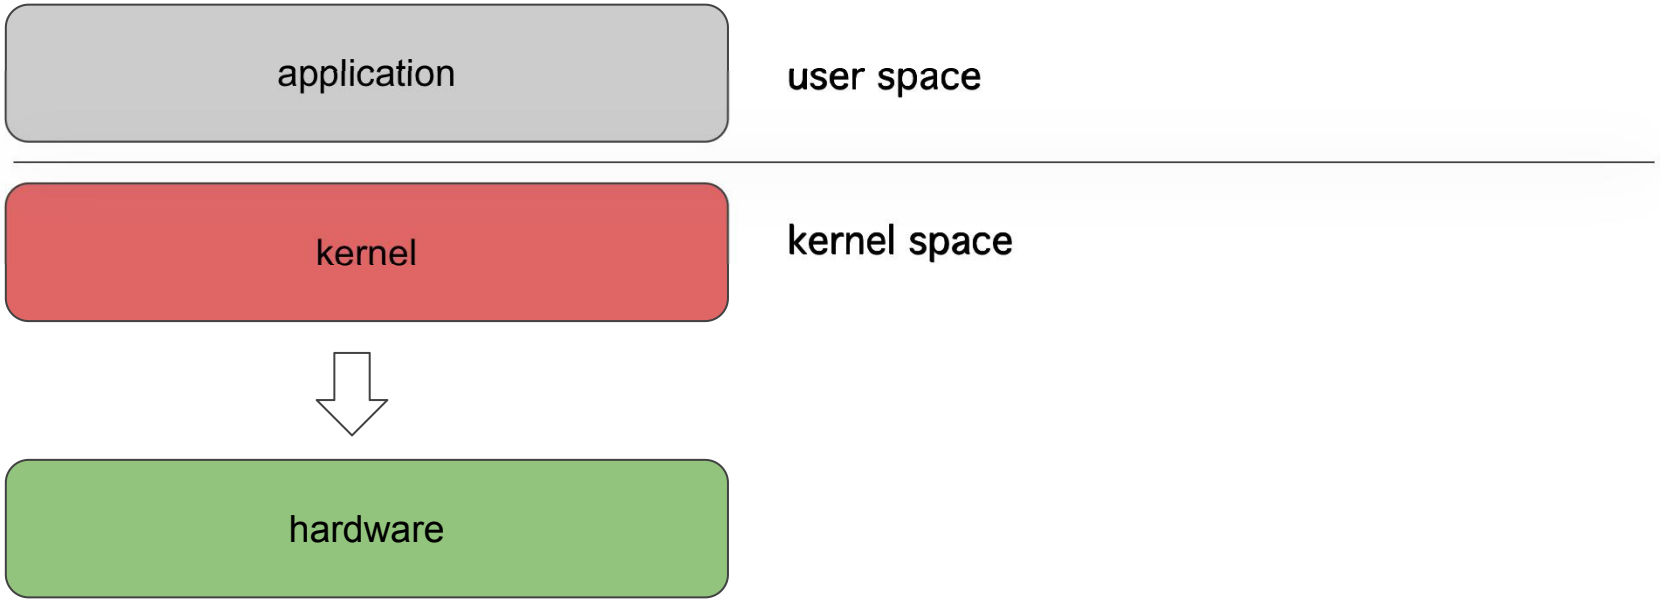
Communication / 通信

- pipe()
- splice()
- mmap()

Kernel / 内核



User & kernel space / 用户空间 & 内核空间



User time	Kernel time
x = 0 **while** x != 10000000: x += 1	*# generate random string of N length* **import** os os.urandom(200000000)
$ time python3 script.py real 0m0,752s **user 0m0,752s** sys 0m0,000s	$ time python3 script.py real 0m1,123s user 0m0,012s **sys 0m1,099s**

File descriptors

文件描述符

File descriptors / 文件描述符

- it's a reference to "something" (usually a file)
- it can be mixed with system calls

- 是对文件/套接字等资源的引用
- 可以和系统调用连用

Print

```
>>> import sys, os
>>> sys.stdout.fileno()
1
>>> os.write(1, b'hello world')
hello world
```

Disk

```
>>> import os
>>> fd = os.open('file', os.O_WRONLY | os.O_CREAT)
>>> os.write(fd, b'hello')
5
>>> os.close(fd)
>>>
>>> fd = os.open('file', os.O_RDONLY)
>>> os.read(fd, 11)
b'hello'
```

Terminal

```
>>> # terminal size
>>> import sys, struct, fcntl, termios
>>> s = struct.pack('HHHH', 0, 0, 0, 0)
>>> t = fcntl.ioctl(sys.stdout.fileno(), termios.TIOCGWINSZ, s)
>>> struct.unpack('HHHH', t)
(55, 105, 0, 0)
```

Summary

- syscall: a gateway to the kernel
- kernel: a gateway to the hardware
- syscalls cause a context switch
- context switches consume time
- syscalls and file descriptors can be mixed together

- 系统调用：与内核交互的途径
- 内核：与硬件交互的途径
- 系统调用将会触发上下文切换
- 上下文切换将会消耗时间
- 系统调用和文件描述符可以连用

Basic socket operations

基础的 socket 操作

Server

```
from socket import socket, AF_INET, SOCK_STREAM
sock = socket(AF_INET, SOCK_STREAM)          # IPv4, TCP
sock.bind(("", 8080))                        # all interfaces, port 8080
sock.listen(5)                               # 监听队列
while True:
    conn, addr = sock.accept()               # accept 连接
    # handle connection
```

Server: IPv4 + IPv6 (Python 3.8)

```
from socket import create_server, AF_INET6
sock = create_server(("", 8080), family=AF_INET6, dualstack_ipv6=True)
while True:
    conn, addr = sock.accept()
    # handle connection/处理连接
```

Client

```
from socket import socket, AF_INET, SOCK_STREAM
sock = socket(AF_INET, SOCK_STREAM)
sock.connect(("127.0.0.1", 8080))
sock.send(b"hello")
sock.recv(8196)
```

Sending files

传输文件

sending a file

```
from socket import create_server, AF_INET6
sock = create_server(("", 8080), family=AF_INET6, dualstack_ipv6=True)
conn, addr = sock.accept()

with open('somefile', 'rb') as file:
    while True:
        chunk = file.read(65536)
        if not chunk:
            break  # EOF
        conn.sendall(chunk)
```

sending a file

```
from socket import create_server, AF_INET6
sock = create_server(("", 8080), family=AF_INET6, dualstack_ipv6=True)
conn, addr = sock.accept()

with open('somefile', 'rb') as file:
    while True:
        chunk = file.read(65536)  # 2 context switches
        if not chunk:
            break  # EOF
        conn.sendall(chunk)  # 2 context switches
```

sending a file

```
from socket import create_server, AF_INET6
sock = create_server(("", 8080), family=AF_INET6, dualstack_ipv6=True)
conn, addr = sock.accept()

with open('somefile', 'rb') as file:
    while True:
        chunk = file.read(65536)  # 1 memory copy
        if not chunk:
            break  # EOF
        conn.sendall(chunk)  # 1 memory copy
```

	read() / send()
system calls	2
context switches	4
memory copies	2

How can we avoid that?

怎么样去避免这些问题？

Zero-copy syscalls
支持零拷贝的系统调用

- sendfile()
- copy_file_range()
- mmap()
- splice() / vmsplice() / tee()
- KTLS (kernel-space TLS)

sendfile() (zero-copy)

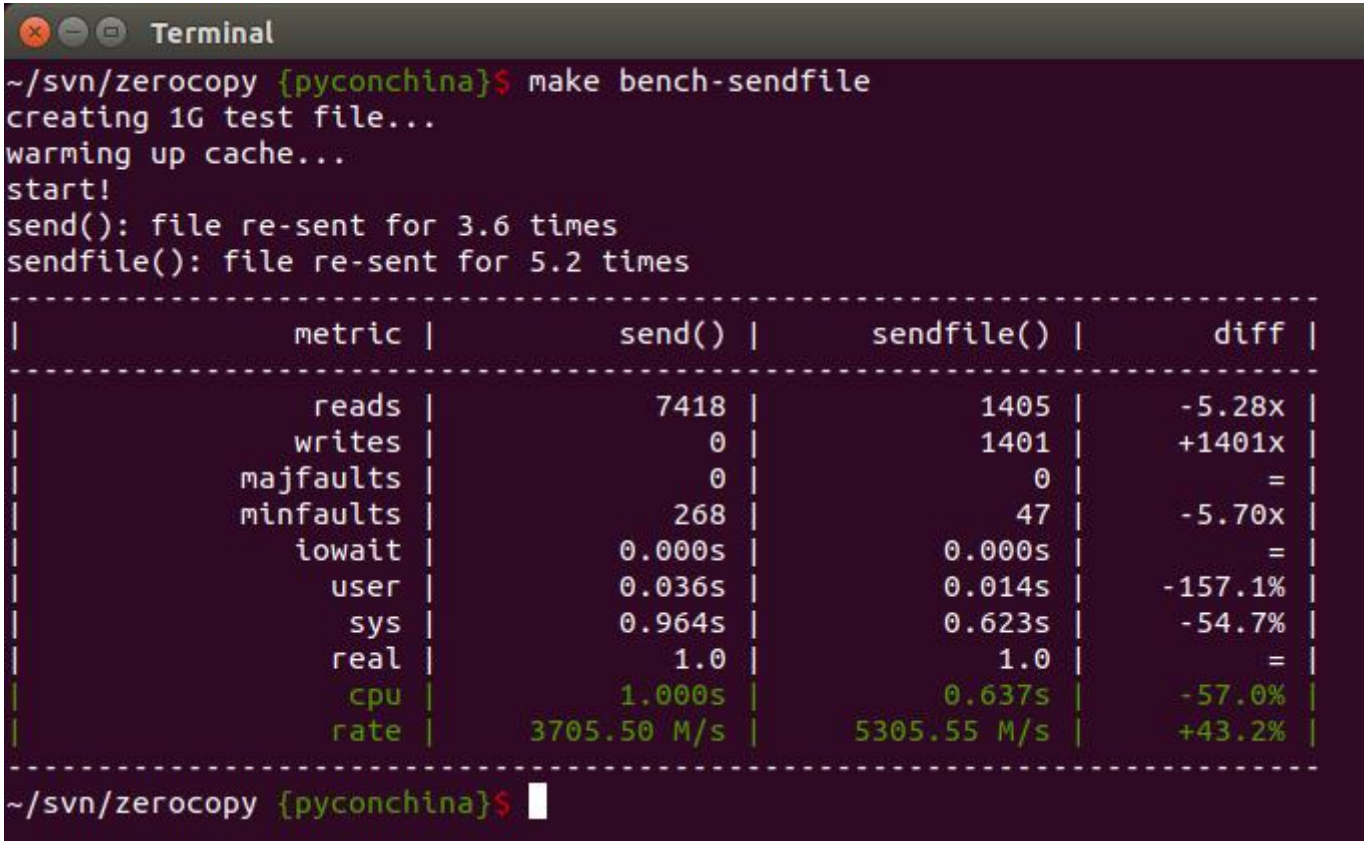
```
import socket, os
sock = socket.create_server(("", 8080))

while True:
    conn, addr = sock.accept()
    with open('somefile', 'rb') as file:
        offset = 0
        while True:
            sent = os.sendfile(conn.fileno(), file.fileno(), offset, 65536)
            if sent == 0:
                break  # EOF
            offset += sent
    conn.close()
```

	read() / write()	sendfile()
system calls	2	1
context switches	4	2
memory copies	2	0

How much faster is sendfile()?

Sendfile 到底有多快？



Terminal
~/svn/zerocopy {pyconchina}$ make bench-sendfile
creating 1G test file...
warming up cache...
start!
send(): file re-sent for 3.6 times
sendfile(): file re-sent for 5.2 times
metric	send()	sendfile()	diff
reads	7418	1405	-5.28x
writes	0	1401	+1401x
majfaults	0	0	=
minfaults	268	47	-5.70x
iowait	0.000s	0.000s	=
user	0.036s	0.014s	-157.1%
sys	0.964s	0.623s	-54.7%
real	1.0	1.0	=
cpu	1.000s	0.637s	-57.0%
rate	3705.50 M/s	5305.55 M/s	+43.2%
~/svn/zerocopy {pyconchina}$

sendfile() limitations

- can be used with regular files only (no io.BytesIO)
- no SSL (but can use KTLS on Linux 4.13)

- 只能用于常规的文件操作
- 不支持 SSL （比如 Linux 4.13 之后的 KTLS）

socket.sendfile() utility (Python 3.5)

```
import socket, os
sock = socket.create_server(("", 8080))
while True:
    conn, addr = sock.accept()
    with open('somefile', 'rb') as file:
        conn.sendfile(file)
    conn.close()
```

Windows TransmitFile (Python 3.9)

- https://bugs.python.org/issue21721

Copying files (efficiently)

高效拷贝文件

File copy

```
>>> import shutil
>>> shutil.copyfile('filein', 'fileout')
```

File copy (Python 3.7)

```
def copyfile(src, dst):
    src = open(src, 'rb')
    dst = open(dst, 'wb')
    while True:
        chunk = src.read(65536)  # 2 ctx switches, 1 memory copy
        if not chunk:
            break                # EOF
        dst.write(chunk)         # 2 ctx switches, 1 memory copy
    src.close()
    dst.close()
```

File copy on Linux (Python 3.8)

```
# requires Linux >= 2.6.33

def copyfile(src, dst):
    src = open(src, 'rb')
    dst = open(dst, 'wb')
    fsize = os.path.getsize(src)
    offset = 0
    while offset != fsize:
        offset += os.sendfile(dst.fileno(), src.fileno(), offset, fsize)
    src.close()
    dst.close()
```

sendfile() limitations for files

- regular files only (no io.BytesIO)
- “write” mode only (no “append”)
- files must live on the same filesystem (no NFS)
- no encrypted file-systems (?)

- 只是常规文件 (无 io.BytesIO)
- 只是“改写”模式 (无 “添加”)
- 文件必须存在同一系统中 (无 NFS)
- 无加密的文件系统 (?)

What about other platforms?

是否适用于其余系统？

What about other platforms?

- Linux: **sendfile**()
- macOS: **fcopyfile**()
- Windows: **CopyFileEx**()
- https://bugs.python.org/issue33671

How much faster is sendfile()?

到底有多快？

Benchmarks

- hot cache
- set highest CPU and disk I/O priority

```
>>> import psutil, os
>>> p = psutil.Process(os.getpid())
>>> p.nice(-20)
>>> p.ionice(psutil.IOPRIO_CLASS_RT, value=7)
```

shutil.copyfile(): Python 3.7 vs. 3.8

Size	Linux	Windows	macOS
128K	+3%	+27%	+8%
8M	+15%	+45%	+47%
512M	+23%	+40%	+50%

copy_file_range() (Python 3.9)

- Linux + NFS
- server-side copy
- https://bugs.python.org/issue37159

Speedup shutil.copytree()

加速 shutil.copytree()

Copy directory tree

```
>>> import shutil
>>> shutil.copytree('somedir', 'somedir-2')
```

shutil.copytree()

Python 3.7	Python 3.8
os.**listdir**() + os.**stat**()	os.**scandir**()
7 os.**stat**() calls per file (worst case)	1 os.**stat**() call per file (best case)

38% less os.stat() syscalls

8000 files in 4 dirs

```
$ strace python3.7 bench.py  2>&1 | grep "stat(" | wc -l
324808
```

```
$ strace python3.8 bench.py  2>&1 | grep "stat(" | wc -l
198768
```

benchmark (8000 files in 4 dirs)

Platform	Speedup
Linux	+8%
Windows	+20%
Windows (network folder)	+38%

Part 2: psutil

psutil

- monitor **system** (CPU, disk, network, temperatures, ...) and **processes**
- cross-platform:
  - Linux
  - Windows
  - macOS
  - FreeBSD, OpenBSD, NetBSD
  - Sun Solaris
  - AIX
- https://github.com/giampaolo/psutil/

System info

系统信息

```

Find memory leaks

```
import psutil, os
from cext import some_c_function

TOLERANCE = 4096
TIMES = 100000

def check_leaks(fun):
    p = psutil.Process(os.getpid())
    mem_before = p.memory_full_info().uss
    fds_before = p.num_fds()
    for x in range(TIMES):
        some_c_function()
    mem_after = p.memory_full_info().uss
    fds_after = p.num_fds()
    assert mem_after - mem_before < TOLERANCE, "memory leak"
    assert fds_after == fds_before, "unclosed fd"

check_leaks(some_c_function)
```

File descriptors

```
>>> p.open_files()
[popenfile(path='/home/giampaolo/monit.py', fd=3, position=0, mode='r', flags=32768),
 popenfile(path='/var/log/monit.log', fd=4, position=235542, mode='a', flags=33793)]
>>>
>>> p.connections()
[pconn(fd=115, family=<AddressFamily.AF_INET: 2>, type=<SocketType.SOCK_STREAM: 1>,
       laddr=addr(ip='10.0.0.1', port=48776), raddr=addr(ip='93.186.135.91', port=80),
       status='ESTABLISHED'),
 pconn(fd=117, family=<AddressFamily.AF_INET: 2>, type=<SocketType.SOCK_STREAM: 1>,
